Employee operations foundation

PrimeCare | Company task master, employee accountability and operating policies | 14 October 2026

What this creates

65 master duty templates for 11 existing roles; a repeatable assignment model; deadline and evidence rules; manager review and exception handling; employee rights and permission design; a separate time/payroll process; and a structure that can expand across large organizations.

What is actually implemented

The template catalog is registered in the local governance database. A backend foundation evaluator has 12 passing tests. Existing marketing APIs already support owner, due date, open/done status, completion evidence, priority, reassignment, rescheduling and escalation. The new company-wide scheduler, manager acceptance, timesheets, payroll and appeals are not deployed.

Important counts

Item	Count / status
Unique master duty templates	65
Roles with defined duties	11
Foundation evaluator tests	12 passed
Actual employee assignments created	0
New public APIs or UI routes activated	0
Payroll payments or deductions performed	0

This is a company operating blueprint and reusable foundation, not a claim that every employee has already been assigned work. No actual employee roster, contracts, shifts or payroll access was available.

1. Fundamental organization structure

Company -> tenant or branch -> department -> team -> employee. Every employee has one identified manager and a primary job profile. A person may hold more than one job assignment, but each task has exactly one accountable owner.

Record	Meaning
Account / role	Who can access an operation. A role does not itself prove employment or a right to wages.
Workforce membership	Employee, contractor, owner/partner or volunteer relationship, effective dates and home tenant.
Job profile	Department, duties, working calendar, manager, training and compensation agreement reference.
Duty template	Reusable operation: cadence, deadline rule, evidence and acceptance criteria.
Task instance	One employee, one occurrence, one due date and one current version.
Acceptance	Authorized reviewer verifies output; self-submission is not independent approval.

A nurse or retired nurse who owns a tenant may be a partner rather than an employee. Define the actual relationship before applying employee timesheets or payroll rules. Clinical duties are outside this first template set and require their own governed workflows and credentials.

2. How an employee receives duties

1. An authorized manager creates or verifies the person's workforce membership and job profile. Record department, location, manager, relationship, working hours and required training.

2. The manager selects only applicable approved templates. The employee does not receive all 65 operations. Shared employee duties and the person's actual job duties are combined without duplicating the same task.

3. The system checks active membership, permission, training, capacity, dependency readiness and effective policy version before a task occurrence is generated.

4. Assign a named employee, acceptance reviewer, explicit due time, evidence requirements and escalation owner. Each assignment receives a version and an acknowledgement request.

5. The employee acknowledges the assignment or raises an access, training, time or scope issue. Acknowledgement is not completion and is not consent to unlawful pay penalties.

6. Event-driven tasks are generated only when the event exists. Recurring tasks use the employee's working calendar, including scheduled days off and approved leave. Repeated jobs use a uniqueness key so a retry cannot generate duplicate tasks.

The template estimates in this guide are planning suggestions. They are not a wage rate, a fixed productivity target or proof of time worked. Group small updates into a daily work log rather than creating excessive administration.

3. Task lifecycle and required decisions

State	Employee / manager action	How it ends
Assigned	Owner acknowledges scope and deadline	Start work or report assignment issue
In progress	Owner records factual progress and next step	Submit evidence or report blocker
Blocked	Owner records reason, dependency owner and support needed	Authorized recovery, reassignment or approved extension
Submitted	Owner provides evidence; review clock starts	Reviewer accepts or returns with reasons
Accepted	Independent reviewer confirms acceptance criteria	Verified output enters performance summaries
Rework	Reviewer explains specific defect and revised instructions	New submission/attempt; earlier history remains
Cancelled	Authorized decision explains why no longer needed	Excluded from completed-output count; history retained

For controlled work, reviewer and owner must be different people. A manager cannot hide their own backlog by leaving submitted work open. Rejected work requires a factual reason and a clear recovery target. Closing, cancellation and reassignment never erase the original record.

Current growth tasks use open/done. The richer lifecycle above is a foundation design, not a live replacement of those API states.

4. What the system records for each operation

Field group	Required contents
Identity and scope	Task ID, template/version, company/tenant/department/team, employee membership and manager.
Assignment	Assigned by, accountable owner, reviewer, created/acknowledged time, planned effort and priority.
Deadline	Original due time, effective due time, timezone/calendar, review due time and approved deadline-change reference.
Execution	State, factual progress, attempt number, evidence references, submitted time and completed/accepted time.
Exceptions	Blocker category, dependency owner, leave/accommodation reference with restricted details, escalation and recovery target.
Review	Reviewer identity, accepted/rework decision, reasons, quality checklist and decision time.
Audit	Actor, previous/new state, command ID, version, event time and source; append-only history.
Payroll reference	Time-entry/timesheet reference only. A task checkbox never directly changes earned wages.

Record business events, not fabricated activity. An API action must carry the authenticated actor; tenant comes from the session, not a free UI field. Attachments have access rules, checksums, malware scanning and retention rules before company-wide use. Avoid copying client or employee medical details into task notes.

5. How the system knows work is late

The backend compares timezone-aware timestamps. The agreed effective deadline is evaluated against the current time and the relevant submission/acceptance event. Scheduling converts local working calendars to stored instants; browser clocks do not decide completion.

Example	System result
Due at 17:00; not submitted at 17:01	Overdue open. Cause still needs review.
Submitted at 16:50; manager has not reviewed	Employee submitted on time; manager review queue shows pending work.
Manager review due at 18:00; still pending next day	Manager review overdue, not employee lateness.
Submitted at 17:40 with a 17:00 deadline	Late submission; keep actual evidence and explanation.
System outage prevented work	Delivery risk plus system blocker. Not automatic employee neglect.
Approved extension from 17:00 to 18:00	Keep both deadlines. Show performance against original and adjusted commitments.
Task cancelled with an approved reason	Not overdue and not counted as verified completed work.

A red status means a work risk exists. It does not establish dishonesty, unwillingness or misconduct. Working-time SLA arithmetic, holiday calendars and shift scheduling remain to be implemented above the tested timestamp evaluator.

6. Evidence, quality and acceptance

Choose evidence appropriate to the operation: an API audit ID for account creation; campaign brief version for creative work; call disposition for contact handling; task result/attachment for a deliverable; or a generated report reference for reporting. A typed sentence saying done is not independent proof of the business result.

Evidence test	Review question
Authentic	Does the source actually exist and refer to this operation?
Relevant	Does it meet this task's agreed acceptance criteria?
Complete	Are the required fields, next owner and result present?
Scoped	Is it from the correct tenant, employee and reporting period?
Safe	Is sensitive information restricted and minimized?
Current	Does the evidence match the current task/template version?

Suspicious duplicate evidence, impossible timestamps or repeated claims should create an investigation case, not an automatic finding. Team metrics count independently accepted work separately from employee submissions. Rework keeps the earlier attempt and reviewer feedback.

7. Permissions and separation of duties

Person / role	Proposed rights	Limits
Employee	Read own assignments; acknowledge; log progress/time; submit evidence; raise blockers and appeal	Cannot approve own controlled output, alter original deadline or view peers' confidential pay
Team manager	Assign within team; review evidence; approve justified recovery; see team exceptions	Cannot grant protected access or change payroll because of a missed task
Tenant admin	Manage own tenant's jobs, work distribution and escalation	No access to another tenant or global confidential employee files
Platform admin	Authorized provisioning, reference records and system incidents	Technical access does not grant unrestricted HR/medical/payroll viewing
Central admin / leadership	Company aggregate risks and authorized cross-tenant governance	Individual sensitive records require an explicit authorized purpose
HR reviewer	Approved employment policies, fairness cases and appeals	Health/accommodation details restricted; not a marketing work queue
Payroll reviewer	Approved time, compensation rules and pay exceptions	No arbitrary performance fines; no privileged account changes

These are proposed workforce permissions, not newly active role grants. The existing platform and marketing API permissions remain unchanged. Every future command must enforce role capability, employee/team scope, tenant scope and required independent approvals on the server.

8. One-person owner and manager dashboards

Leadership sees exceptions first

Company/tenant/team totals: due work, overdue open work, verified accepted output, waiting-for-manager review, external blockers, disputed cases, overdue reviewer decisions and payroll records awaiting verification. Every total shows its date range, timezone and update time.

Who is behind?

List the task, owner, reviewer, deadline, original/effective deadline difference, evidence status, factual delay reason and next recovery owner. Do not show a label such as lazy or not doing the job. Unknown causes stay unknown until reviewed.

Manager accountability

Show review backlog age, missed approval SLA, unsupported assignments, delayed blocker response, overloaded employees and excessive deadline changes. Company performance includes manager and system delays, not just employee delays.

Employee visibility

Employees see their own due work, accepted output, feedback, blocked cases, proposed workload, time records and appeal status. Team comparisons use similar roles and workload, with sensitive pay/health information excluded.

Actionable views

Each exception has a corrective action: provide access, train, unblock a dependency, rebalance work, correct evidence, review a submission or open a fair performance case. Reports link to the underlying authorized records; a dashboard number alone is not a disciplinary finding.

9. Metrics that are useful and fair

Metric	Definition / interpretation
Employee on-time submission	Eligible tasks submitted by agreed deadline / eligible due tasks. Show excluded cases and reasons separately.
Verified completion	Accepted task instances / required due task instances; cancelled tasks are separate.
First-pass quality	Submissions accepted without rework / reviewed submissions.
Manager review SLA	Reviews completed by review due time / reviews due.
Blocker age	Working time since blocker report and time since agreed response checkpoint.
Unresolved deadline changes	Original and effective commitments shown together; no rewriting history.
Workload ratio	Planned work compared with available scheduled capacity after approved exceptions.
Marketing outcomes	Qualified leads, source costs and stages with evidence. Conversion depends on context and is not a direct measure of employee honesty.

Do not compare a caller's activity volume with an SEO specialist's output. Calibrate targets from a defined baseline period, budget and role complexity. Count opportunities, workload and dependency availability. Avoid rewarding task splitting or superficial activity just to inflate completion totals.

10. Pay, time and performance are separate

Employment compensation follows the applicable agreement and law. Accurate time and wage records support payroll. Task results support performance review and agreed prospective incentives; they must not automatically withhold earned wages.

Payroll process

Employee submits actual time -> manager verifies factual exceptions -> payroll reviewer resolves discrepancies -> approved payroll export -> payment/payslip reference. A disputed or incomplete task is handled in a performance/support case, not by secretly reducing pay.

Examples

Hourly employee: record actual worked time and applicable approved adjustments. Salaried employee: follow the salary agreement; missing a task is not a new automatic fine. Contractor: assess deliverables and invoice terms separately from employee payroll. Bonus: publish clear prospective criteria, attribution and approval rules, without removing statutory entitlements.

Ontario baseline

Ontario wage deductions are limited. Faulty-work deductions are prohibited even with employee authorization. Keep wage/time records as required; do not implement a missed-task wage deduction rule. Source: Ontario payment-of-wages guidance and ESA section 13.

The foundation intentionally provides no automatic pay-reduction function and executes no payroll. Worker classification, applicable jurisdiction, overtime, leave and contract rules must be configured and approved before payroll integration.

11. Employee rights and company policy

Policy right	System behavior
Know the job	Visible duties, due dates, expected evidence, training and review rules before assignment.
See and correct own record	Employee can view relevant work/time records and request factual corrections; earlier entries remain audited.
Raise a blocker	Protected support request with a named response owner; no fabricated activity expected.
Fair workload	Capacity, permissions, equipment, training and approved exceptions considered before targets.
Explain and appeal	Employee explanation, evidence and appeal route recorded before a disputed performance finding.
Clear monitoring	Disclose what work-event data is collected, when, why and who sees it. No hidden screenshot/keylogging feature in this foundation.
Restricted personal data	Only authorized reviewers access employment, pay or accommodation details.
No retaliation for protected rights	A complaint, statutory leave or request to comply with employment standards must not itself become a punishment rule.

The first seven rows are proposed company safeguards. Ontario's ESA prohibits reprisals for specified protected activities. Employers meeting the January 1 threshold of 25 employees must have the required electronic-monitoring policy. The policy requirement does not itself create a general privacy right. Source references are listed at the end.

12. Handling poor performance fairly

1. Identify a specific missed expectation using actual assignment, deadline and evidence records.

2. Check whether the assignment was clear, within authorized hours/capacity and supported by access, training and equipment.

3. Separate employee-controlled delay from manager delay, system failure, dependent team delay and approved leave or accommodation.

4. Give the employee the facts and a chance to explain or correct the record. Restrict sensitive details to authorized reviewers.

5. Agree on support, training, a revised plan or measurable improvement checkpoints. Record manager commitments too.

6. Review a reasonable sample and trend, not one red dashboard cell. Use similar roles and workload; avoid hidden scoring rules.

7. Route any formal employment decision through the authorized human process and applicable rules. Preserve evidence and appeal history.

The system flags cases for review. It does not automatically fire people, decide misconduct, recover damages or reduce earned pay. No such employment decision is made by the foundation evaluator.

13. Operating cadence for the company

When	Employee	Manager / leadership
Start of shift	Review own due work; acknowledge priorities and access issues	Check capacity, leave, missing owners and urgent dependencies
During work	Record factual output and blockers; agree next steps	Respond to blocker queue and necessary approvals
Shift end	Submit evidence and handover; record actual time	Review incomplete commitments and handover coverage
Daily review	Explain own exceptions	Clear submitted-work backlog; assign support and recovery owners
Weekly review	Review feedback and agreed development actions	Role-specific output, quality, workload and deadline trends
Payroll cutoff	Submit/correct time record	Verify records and resolve pay exceptions through payroll rights
Monthly review	Confirm revised duties and policies	Review access, template quality, capacity and policy versions

These meetings and records should be proportionate. One owner with a small team can run daily and weekly exception views; a larger company delegates these responsibilities through department and team managers.

14. Scaling to a large organization

Keep one logical work record and owner per operation, with organizational scope on every record. Managers receive their own queues; leadership receives aggregates and authorized drill-down. Do not load all employee tasks into a browser or run full-table deadline scans on each page visit.

Scheduling: generate only the next necessary occurrences. Use an idempotent employee/template/schedule/period key and retryable queues.

Data: index tenant, owner, state and due time. Use paginated lists, separate read models for summaries, and explicit reporting periods.

Events: append task/assignment/review changes with actor and version. Process notifications and aggregates asynchronously with durable checkpoints.

Delegation: temporary reviewer coverage has a reason, expiry and tenant/team boundary. Escalations have an accountable next owner.

Calendars: store timezone, workweek, holidays and approved exceptions. Re-evaluate DST transitions and cross-location handovers.

Isolation: server-enforced scope; deny cross-tenant access; audit authorized global exceptions. Sensitive HR data uses separate case access.

Reliability: transaction/outbox boundaries, retries without duplicate assignments, backup/restore tests, retention rules and observable queue delays.

Capacity: test realistic employee/tenant distributions, bursts and long-lived tasks before promising any headcount or response-time guarantee.

15. Planned data model and API boundary

Entity group	Purpose / status
Existing users, roles, tenants	Existing identity and access infrastructure. Not an employment contract or timesheet.
Existing growth_tasks + audit	Current marketing task ownership, due date, open/done and task actions.
workforce_foundation_templates / policy	Local governance catalog created by this task. No real employee tasks generated.
Memberships, jobs, duty assignments, calendars	Planned workforce relationship and recurring assignment model.
Task instances, attempts, events, blocker cases	Planned company-wide evidence and accepted-work lifecycle.
Time entries, timesheet reviews, payroll exports	Planned separate compensation-record workflow.
Performance reviews, appeals, policy versions	Planned fair-review and employee-policy evidence.

No new runtime API endpoint was invented or activated. Before implementing each workflow, register its screen/controls, schema, operation contract, role rights, translations and audit requirements in governance. UI renders API data; it performs no direct database transaction.

The foundation evaluator consumes validated records and compares deadlines. It is not an authentication/authorization boundary, recurrence scheduler, payroll calculator or deployed public service.

16. Implementation plan and acceptance gates

Phase	Deliverable	Proof required
1 - Foundation (local)	65 templates, governance registry and deadline evaluator	Role validation, unique templates, evidence/owner rules and passing evaluator tests
2 - Job and assignment API	Real employee roster, job profile, calendars and template assignment	Tenant isolation, manager scope, valid working-time deadlines and duplicate prevention
3 - Execution and review	Submission, evidence, manager acceptance, blockers and recovery	Owner/reviewer separation, version conflicts, immutable original commitments and audit
4 - Dashboards and fairness	Employee inbox, manager queue, aggregate reports and appeals	Accurate denominators, manager delays shown separately, restricted personal data
5 - Time and payroll connection	Approved time records and authorized export	Pay rules, record retention, dispute handling and payroll reconciliation
6 - Organization rollout	Pilot, training and progressive team activation	Real scenario acceptance, employee policy distribution, performance and recovery tests

Only phase 1 is newly completed locally. Existing marketing task features provide a limited baseline; they do not make phases 2-6 complete. No employee assignment, live payroll change or deployment is claimed.

17. Example: overdue case and resolution

Example data below is hypothetical; it is not a real employee record.

Task record	Observation
Owner	Caller A; manager Marketing Lead
Operation	Follow up a requested enquiry and record disposition
Original deadline	Tuesday 16:00 Toronto time
Submission	Tuesday 15:50, call outcome and next follow-up recorded
Manager review due	Wednesday 10:00
Actual review	Wednesday 14:00
Correct assessment	Employee submitted on time; manager review late. No missed-task wage penalty.

Second case: Google Specialist B cannot access the authorized advertising account. The employee reports the access blocker, including the needed role and dependency owner. Platform support restores access or the manager approves a documented extension. The company still sees the delivery risk; the employee is not automatically blamed for missing access.

Third case: no submission and no explanation after a clear, supported due task. Create an unknown-cause review case first. The manager asks for facts, checks workload and records the recovery plan. The system alone does not establish neglect.

Task master: Shared employee duties

Applicable roles: central_admin, platform_admin, tenant_admin, marketing, local_marketing, growth_caller, growth_google, growth_meta, growth_seo, growth_offline, growth_coordinator. Reviewer candidates: tenant_admin, central_admin, ceo.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

EMP-01 | Review today's assignments | daily | planning 10 min

Deadline: Before scheduled shift work begins.

Record: Work plan acknowledgement.

Accepted when: Priority order and capacity conflicts recorded.

EMP-02 | Acknowledge new assignment | event | planning 5 min

Deadline: Within assigned working-time SLA.

Record: Acknowledgement event.

Accepted when: Scope, due date and acceptance rules understood; concerns raised.

EMP-03 | Record work progress | daily | planning 10 min

Deadline: By scheduled shift end.

Record: Progress note linked to work item.

Accepted when: Actual output and next step; no fabricated activity.

EMP-04 | Report a blocker | event | planning 10 min

Deadline: As soon as a deadline risk is known.

Record: Blocker reason and support request.

Accepted when: Dependency owner, impact and proposed recovery documented.

EMP-05 | Submit completion evidence | event | planning 10 min

Deadline: By task-specific agreed deadline.

Record: Result link, record IDs or approved attachment.

Accepted when: Evidence meets template criteria; submission is not manager acceptance.

EMP-06 | Submit accurate time record | pay_period | planning 15 min

Deadline: By published payroll cutoff.

Record: Hours and approved exception record.

Accepted when: Actual hours, breaks and approved leave; payroll dispute can be raised.

Task master: Central administration duties

Applicable roles: central_admin. Reviewer candidates: ceo.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

CENT-01 | Approve organization structure | event | planning 30 min

Deadline: Before department activation.

Record: Approved reporting and scope map.

Accepted when: Manager, tenant and escalation owner defined.

CENT-02 | Review verified tenant onboarding | event | planning 30 min

Deadline: By onboarding agreement deadline.

Record: Verification and decision record.

Accepted when: Business evidence checked; activation authority separately enforced.

CENT-03 | Publish approved company policies | monthly | planning 60 min

Deadline: Before policy effective date.

Record: Version and employee acknowledgement distribution.

Accepted when: Changes reviewed, visible and not applied retroactively.

CENT-04 | Review global privilege requests | event | planning 20 min

Deadline: Before privileged access is granted.

Record: Reason, approvals and expiration.

Accepted when: Least privilege; no self-approval for protected access.

CENT-05 | Resolve escalated organization risk | event | planning 30 min

Deadline: Priority-specific working-time target.

Record: Decision, support owner and next checkpoint.

Accepted when: Risk triaged; actions assigned without concealed deadline changes.

CENT-06 | Review leadership accountability report | weekly | planning 45 min

Deadline: Agreed weekly leadership review.

Record: Exception decisions and action owners.

Accepted when: Employee, manager and system delays reviewed separately.

Task master: Platform administration duties

Applicable roles: platform_admin. Reviewer candidates: central_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

PLAT-01 | Provision an approved tenant | event | planning 20 min

Deadline: Approved onboarding due date.

Record: Tenant creation audit ID.

Accepted when: Approved identity, slug and active scope verified.

PLAT-02 | Create or amend authorized accounts | event | planning 20 min

Deadline: Approved request due date.

Record: Account and role-change audit IDs.

Accepted when: Assignable role only; sensitive credentials handled securely.

PLAT-03 | Maintain approved master records | event | planning 20 min

Deadline: Before dependent workflow needs the record.

Record: Master record version and audit.

Accepted when: Duplicate and invalid values rejected; scope verified.

PLAT-04 | Review administrator access | monthly | planning 60 min

Deadline: Published access review date.

Record: Reviewed access list and approved removals.

Accepted when: Inactive or excess access escalated and changes audited.

PLAT-05 | Check service incidents | daily | planning 20 min

Deadline: Start of scheduled support shift.

Record: Health review and incident references.

Accepted when: Failures recorded as system blockers, not employee inactivity.

PLAT-06 | Produce platform administration report | weekly | planning 25 min

Deadline: Agreed reporting cutoff.

Record: Server-generated report reference.

Accepted when: Correct scope, period and classification; totals not invented.

PLAT-07 | Investigate audit exceptions | daily | planning 30 min

Deadline: Priority-specific review window.

Record: Finding and follow-up task.

Accepted when: Risk, actor, tenant and remediation recorded.

Task master: Tenant administration duties

Applicable roles: tenant_admin. Reviewer candidates: central_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

TEN-01 | Onboard tenant employees | event | planning 45 min

Deadline: Before authorized first shift.

Record: Job profile, training and access checklist.

Accepted when: Manager, role, department, location and working calendar assigned.

TEN-02 | Assign approved duty templates | event | planning 30 min

Deadline: Before assignment effective date.

Record: Employee-to-template assignment version.

Accepted when: Capacity, access, training and acceptance requirements checked.

TEN-03 | Balance today's workload | daily | planning 20 min

Deadline: Before scheduled team work begins.

Record: Capacity review and priority plan.

Accepted when: Leave, hours and dependencies considered; overload escalated.

TEN-04 | Review submitted work | daily | planning 30 min

Deadline: Within agreed reviewer working-time SLA.

Record: Accept or return decision with reasons.

Accepted when: Manager cannot silently age employee work as employee lateness.

TEN-05 | Resolve blocked work | daily | planning 30 min

Deadline: At agreed blocker checkpoint.

Record: Support action and dependency decision.

Accepted when: Approved extension or reassignment recorded; original deadline retained.

TEN-06 | Publish tenant accountability report | weekly | planning 45 min

Deadline: Weekly tenant reporting cutoff.

Record: Report and exception actions.

Accepted when: Risk, verified output, blocked work and reviewer backlog separated.

TEN-07 | Revoke access during offboarding | event | planning 30 min

Deadline: At approved separation/access cutoff.

Record: Revocation and handover audit.

Accepted when: No hidden payroll retaliation; unfinished work reassigned.

Task master: Marketing management duties

Applicable roles: marketing, local_marketing. Reviewer candidates: tenant_admin, ceo.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

MKT-01 | Set period lead and conversion plan | monthly | planning 60 min

Deadline: Before campaign period starts.

Record: Approved plan version.

Accepted when: Targets have budget, source, owner and assumptions.

MKT-02 | Triage new leads | daily | planning 30 min

Deadline: Agreed lead-response working-time target.

Record: Owner and follow-up due date.

Accepted when: Contact basis checked; duplicates and restricted contacts handled.

MKT-03 | Prepare campaign brief for approval | event | planning 60 min

Deadline: Before planned campaign activity.

Record: Audience, offer, creative, attribution and budget brief.

Accepted when: No campaign launched before required approval.

MKT-04 | Review campaign performance | weekly | planning 45 min

Deadline: Weekly marketing review cutoff.

Record: Source-to-stage performance report.

Accepted when: Spend, qualified leads and conversions have evidence.

MKT-05 | Review marketing team workload | daily | planning 20 min

Deadline: Start of scheduled marketing work.

Record: Assignment and capacity review.

Accepted when: Callers and experts have specific owners and next actions.

MKT-06 | Review campaign spend exceptions | daily | planning 20 min

Deadline: Agreed spend-review checkpoint.

Record: Actual spend reference and escalation.

Accepted when: Actual external spend is not fabricated or automatically assumed synced.

MKT-07 | Review verified partner handoff | event | planning 30 min

Deadline: Partner handoff due date.

Record: Verification, contact and activation handoff.

Accepted when: Required central/platform authorization preserved.

MKT-08 | Submit weekly marketing report | weekly | planning 45 min

Deadline: Leadership reporting cutoff.

Record: Performance PDF and recommended corrective actions.

Accepted when: Period, scope, conversions and blockers explained.

Task master: Telephone caller duties

Applicable roles: growth_caller. Reviewer candidates: marketing, tenant_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

CALL-01 | Review assigned contact queue | daily | planning 15 min

Deadline: Before scheduled calls.

Record: Approved assigned queue.

Accepted when: Contact restrictions and next-step priority checked.

CALL-02 | Record each call outcome | event | planning 5 min

Deadline: During work or promptly after each call.

Record: Call outcome and factual notes.

Accepted when: No answered call claimed without evidence; sensitive detail minimized.

CALL-03 | Set next follow-up | event | planning 5 min

Deadline: After contact disposition is known.

Record: Follow-up owner and due date.

Accepted when: Date agreed with contact; stopped contacts excluded.

CALL-04 | Book or hand off appointment | event | planning 10 min

Deadline: Agreed booking response window.

Record: Appointment and handoff reference.

Accepted when: Consent and owner confirmed; no care-delivery claim from booking.

CALL-05 | Report unanswered or blocked cases | daily | planning 15 min

Deadline: Shift-end review.

Record: Exception queue and requested support.

Accepted when: No answer, unavailable contact and system outage distinguished.

Task master: Google marketing expert duties

Applicable roles: growth_google. Reviewer candidates: marketing, tenant_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

GOOG-01 | Capture authorized Google-source enquiries | daily | planning 30 min

Deadline: Agreed enquiry response window.

Record: Lead source and campaign references.

Accepted when: Permission/contact basis verified; no invented prospects.

GOOG-02 | Prepare Google campaign work | event | planning 60 min

Deadline: Brief-specific deadline.

Record: Research, keywords, creative or landing review.

Accepted when: Work matches approved brief; publication requires authorization.

GOOG-03 | Check campaign attribution | weekly | planning 30 min

Deadline: Before weekly report cutoff.

Record: Source/UTM test and attribution note.

Accepted when: Observed sources accurately mapped to CRM leads.

GOOG-04 | Record verified spend and outcomes | daily | planning 20 min

Deadline: Published campaign update checkpoint.

Record: External reference and actual metrics.

Accepted when: Manual status clear when no live integration exists.

GOOG-05 | Recommend campaign corrections | weekly | planning 30 min

Deadline: Weekly marketing review.

Record: Evidence-based next action.

Accepted when: Manager approves changes and revised spend before execution.

Task master: Facebook / Meta expert duties

Applicable roles: growth_meta. Reviewer candidates: marketing, tenant_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

META-01 | Capture authorized Meta-source enquiries | daily | planning 30 min

Deadline: Agreed enquiry response window.

Record: Lead and source references.

Accepted when: Contact permissions and duplicate checks applied.

META-02 | Prepare approved social creative | event | planning 60 min

Deadline: Campaign brief due date.

Record: Creative and review reference.

Accepted when: Copy, audience and offer match approved campaign.

META-03 | Check landing and response flow | weekly | planning 30 min

Deadline: Before campaign review.

Record: Form/link test evidence.

Accepted when: Broken links and unavailable services reported as blockers.

META-04 | Record verified Meta campaign results | daily | planning 20 min

Deadline: Published update checkpoint.

Record: Observed spend and lead evidence.

Accepted when: No unsupported automatic platform synchronization claim.

META-05 | Request social campaign adjustments | weekly | planning 30 min

Deadline: Weekly marketing review.

Record: Recommendation with quality/conversion evidence.

Accepted when: No unauthorized publication or spend change.

Task master: SEO expert duties

Applicable roles: growth_seo. Reviewer candidates: marketing, tenant_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

SEO-01 | Review authorized organic enquiries | daily | planning 20 min

Deadline: Agreed enquiry response window.

Record: Organic source lead reference.

Accepted when: Source evidence and contact basis recorded.

SEO-02 | Prepare search content work | event | planning 60 min

Deadline: Approved content brief due date.

Record: Draft, keywords and source checks.

Accepted when: Accurate content; required review before publication.

SEO-03 | Check search landing accessibility | weekly | planning 30 min

Deadline: Weekly website review.

Record: Link, form and page findings.

Accepted when: Failures classified as site dependencies with repair owners.

SEO-04 | Record organic performance evidence | weekly | planning 30 min

Deadline: Marketing reporting cutoff.

Record: Observed traffic/lead attribution reference.

Accepted when: Vanity traffic separated from qualified leads.

SEO-05 | Recommend organic improvements | weekly | planning 30 min

Deadline: Weekly review.

Record: Prioritized proposal.

Accepted when: Expected effort and measurable acceptance checks included.

Task master: Offline campaign duties

Applicable roles: growth_offline. Reviewer candidates: marketing, tenant_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

OFF-01 | Prepare approved offline campaign | event | planning 60 min

Deadline: Before event or distribution date.

Record: Event plan, materials and approval reference.

Accepted when: Location, budget, owner and consent flow defined.

OFF-02 | Validate campaign QR and enquiry link | event | planning 15 min

Deadline: Before distribution.

Record: Scannable test and intake reference.

Accepted when: Correct campaign attribution and functional intake.

OFF-03 | Record event leads with permission | event | planning 30 min

Deadline: Agreed event processing deadline.

Record: Enquiry and consent/source evidence.

Accepted when: No unsolicited roster conversion into clients.

OFF-04 | Record offline costs and receipts | event | planning 20 min

Deadline: Published reconciliation cutoff.

Record: Receipt and actual spend references.

Accepted when: No unsupported spend entry or duplicate receipt.

OFF-05 | Submit offline campaign outcome report | weekly | planning 30 min

Deadline: Weekly marketing reporting cutoff.

Record: Event-to-stage outcomes.

Accepted when: Contacts, qualified leads and conversions separated.

Task master: Marketing coordinator duties

Applicable roles: growth_coordinator. Reviewer candidates: marketing, tenant_admin.

Select applicable duties for a real employee job profile. Estimates are planning guidance, not paid output units. These templates are not live employee assignments.

COORD-01 | Triage assigned coordination queue | daily | planning 15 min

Deadline: Start of scheduled shift.

Record: Priority queue acknowledgement.

Accepted when: Assigned scope only; missing owners escalated.

COORD-02 | Coordinate appointment follow-ups | daily | planning 30 min

Deadline: Agreed booking and reminder target.

Record: Follow-up and handoff references.

Accepted when: Owners and promised times match records.

COORD-03 | Review daily overdue exceptions | daily | planning 20 min

Deadline: Team review checkpoint.

Record: Risk list with factual reasons.

Accepted when: Employee, dependency and reviewer delay separated.

COORD-04 | Coordinate blocker recovery | event | planning 20 min

Deadline: Agreed recovery checkpoint.

Record: Support owner and next step.

Accepted when: Coordinator cannot grant extra privilege or silently change targets.

COORD-05 | Check record completeness | daily | planning 20 min

Deadline: Shift-end data review.

Record: Missing evidence/owner/deadline findings.

Accepted when: Correct through authorized actions; no invented completion.

COORD-06 | Submit coordination handover | daily | planning 15 min

Deadline: Scheduled shift handover.

Record: Open/blocked/review-needed list.

Accepted when: Next owner explicitly acknowledges handover.

Source references and policy status

Ontario baseline checked on 14 October 2026. These references support the employment-standard statements; most operating safeguards in this guide are proposed company policies rather than quotations of legislation.

Payment of wages / deductions

Written electronic-monitoring policy

https://www.ontario.ca/document/your-guide-employment-standards-act-0/written-policy-electronic-monitoring-employees

Reprisals

https://www.ontario.ca/document/your-guide-employment-standards-act-0/reprisals

Ontario guidance requires retention of specified employee, hours and wage records. Some cited wage/time records have three-year requirements; do not apply a single three-year rule to every company record. Build a record-category retention schedule for each applicable jurisdiction, including policy versions and legally required holds.

Policy status: draft for company adoption. The employee-duty catalog covers current admin/marketing roles. Other departments, clinical duties and jurisdiction-specific compensation require separate definitions. Source artifacts: foundation-seed.json, the governance registry/export and the non-deployed WorkAccountability evaluator.

Validation result: 65 unique duty templates, 11 existing roles, 12 passing foundation tests, zero actual employee assignments and no new public API or live payroll/deployment change.
